Suicide as a Learned Behavior

With recent studies using genetic, epigenetic, and other molecular and neurochemical approaches, a new era has begun in understanding pathophysiology of suicide. Emerging evidence suggests that neurobiological factors are not only critical in providing potential risk factors but also provide a promising approach to develop more effective treatment and prevention strategies. The Neurobiological Basis of Suicide discusses the most recent findings in suicide neurobiology. Psychological, psychosocial, and cultural factors are important in determining the risk factors for suicide; however, they offer weak prediction and can be of little clinical use. Interestingly, cognitive characteristics are different among depressed suicidal and depressed nonsuicidal subjects, and could be involved in the development of suicidal behavior. The characterization of the neurobiological basis of suicide is in delineating the risk factors associated with suicide. The Neurobiological Basis of Suicide focuses on how and why these neurobiological factors are crucial in the pathogenic mechanisms of suicidal behavior and how these findings can be transformed into potential therapeutic applications.

Reducing Suicide-Institute of Medicine

Every year, about 30,000 people die by suicide in the U.S., and some 650,000 receive emergency treatment after a suicide attempt. Often, those most at risk are the least able to access professional help. Reducing Suicide provides a blueprint for addressing this tragic and costly problem: how we can build an appropriate infrastructure, conduct needed research, and improve our ability...
to recognize suicide risk and effectively intervene. Rich in data, the book also strikes an intensely personal chord, featuring compelling quotes about people’s experience with suicide. The book explores the factors that raise a person’s risk of suicide: psychological and biological factors including substance abuse, the link between childhood trauma and later suicide, and the impact of family life, economic status, religion, and other social and cultural conditions. The authors review the effectiveness of existing interventions, including mental health practitioners’ ability to assess suicide risk among patients. They present lessons learned from the Air Force suicide prevention program and other prevention initiatives. And they identify barriers to effective research and treatment. This new volume will be of special interest to policy makers, administrators, researchers, practitioners, and journalists working in the field of mental health.

Suicide and Self-Damaging Behavior-Denys deCatanzaro 2013-10-22 Suicide and Self-Damaging Behavior: A Sociobiological Perspective reviews the status of suicide and other exceptions to the prevailing regularities of behavior. This book discusses the apparent anomaly of self-destructive behavior; current incidence of suicide and self-injury; self-destructiveness in other species; and biological fitness and social ecology of suicide. The pro-suicidal gene expression and natural selection; death concept; breakdown of other life-preserving factors with coping failure; and selection processes and altruism are also elaborated. This text likewise covers the chronic self-abuse, risk taking, and self-injurious or self-mutilative behavior. This publication is a good source for anthropologists, psychologists, sociologists, and social scientists concerned with self-destructive behavior.

Suicide in Later Life-Nancy J. Osgood 1992 Looks at the growing problem of suicide, describes the warning signs of a possible suicide attempt, and discusses euthanasia, assisted suicide, and
health care rationing
The Economy and Suicide-David Lester 1997 Economy & Suicide
Economic Perspectives On Suicide
Why People Die by Suicide-Thomas Joiner 2007-09-30 Drawing on extensive clinical and epidemiological evidence, as well as personal experience, Thomas Joiner provides the most coherent and persuasive explanation ever given of why and how people overcome life's strongest instinct, self-preservation. He tests his theory against diverse facts about suicide rates among men and women; white and African-American men; anorexics, athletes, prostitutes, and physicians; members of cults, sports fans, and citizens of nations in crisis.
The Psychology of Suicide: From Research Understandings to Intervention and Treatment-Yossi Levi-Belz 2019-07-11 Suicide is a highly complex and multifaceted phenomenon, with many contributing and facilitating factors and variables. However, given its being one of the most severe human behaviors, an obvious focus would be to identify the underlying psychological mechanisms and processes that may lead to suicidal ideation and behavior. This eBook is dedicated to studies exploring various approaches to the psychology of suicidal behavior as well as of non-suicidal self-injury (NSSI). The purpose of this eBook is to shed light on in-depth examinations of the current knowledge and empirical data regarding models, theories, and specific dimensions and variables that may help us increase the psychological understanding of suicidal phenomena. The specific goal is to identify particular psychological characteristics that may be used to develop prevention and intervention methods and programs. We believe that this eBook can contribute to the understanding of this behavior and help to develop specific tools, therapeutic guidelines, and programs that may help reduce the number of suicides occurring annually. This eBook is dedicated to our dearest friend, Dafni Assaf, who was one of the greatest leaders of the suicide prevention program in Israel.
THEORIES OF SUICIDE-John F. Gunn 2015-06-01 Some researchers in the field of suicidology think that the old theories of suicide are too constraining and impede advances in the understanding of suicide. However the book’s authors are not quite so critical of past theories. In the book they review the classic theories of suicide, both psychological and sociological, because they are the foundation of our current theories and also propose the skeletons of possible future theories. The goal of the text is to present researchers with theories to guide their research, encourage them to modify these theories, perhaps meld them together in some cases, and think how they might propose new theories. Presented in three sections, the first reviews significant psychological theories including: Suicide as Escape; Interpersonal-Psychological theory; The Role of Defeat and Entrapment in Suicidal Behavior; Suicide, Ethology and Sociobiology; Stress-Diatheses; Cognitive Theories; Learning Perspective on Suicide; Theories of Personality and Suicide; Typological Theories; and the Pathophysiology of Suicide. The second section of the text addresses Sociological and Economic Theories including: Suicide as Deviance, Naroll’s Thwarting Disorientation Theory, three classic sociological theories as well as several minor theories. A comprehensive chapter on economic theories is offered by Bijou Yang. The final section concentrates on Critical Thoughts About Theories of Suicide, a new and growing influence in academia and scholarship.

Dialectical Behavior Therapy with Suicidal Adolescents-Alec L. Miller 2017-05-19 Filling a tremendous need, this highly practical book adapts the proven techniques of dialectical behavior therapy (DBT) to treatment of multiproblem adolescents at highest risk for suicidal behavior and self-injury. The authors are master clinicians who take the reader step by step through understanding and assessing severe emotional dysregulation in teens and implementing individual, family, and group-based interventions. Insightful guidance on everything from orientation
to termination is enlivened by case illustrations and sample dialogues. Appendices feature 30 mindfulness exercises as well as lecture notes and 12 reproducible handouts for "Walking the Middle Path," a DBT skills training module for adolescents and their families. Purchasers get access to a Web page where they can download and print these handouts and several other tools from the book in a convenient 8 1/2" x 11" size. See also Rathus and Miller's DBT Skills Manual for Adolescents, packed with tools for implementing DBT skills training with adolescents with a wide range of problems.

Cognitive Behavioral Therapy for Preventing Suicide Attempts-Craig J. Bryan 2015-02-11 Cognitive Behavioral Therapy for Preventing Suicide Attempts consolidates the accumulated knowledge and efforts of leading suicide researchers, and describes how a common, cognitive behavioral model of suicide has resulted in 50% or greater reductions in suicide attempts across clinical settings. Simple and straightforward descriptions of these techniques are provided, along with clear explanations of the interventions’ rationale and scientific support. Critically, specific adaptations of these interventions designed to meet the demands and needs of diverse settings and populations are explained. The result is a practical, clinician-friendly, how-to guide that demonstrates how to effectively reduce the risk for suicide attempts in any setting.

The Psychological Autopsy-Antoon Leenaars 2017-02-10 The best way to grasp the essence of death scene investigation (DSI) is to witness its application, called the psychological autopsy, by an expert forensic scientist/clinician. This remarkable book affords the opportunity to delve into the challenges that the forensic mental health specialist and public safety professional confront in DSI. Suicides, and often death, are complex, multidetermined events. People, whether police investigators or mental health professionals, are generally perplexed, and even confused, when they are confronted by the equivocal case. Was it a suicide?
Homicide? Accident? These are critical questions. Dr. Leenaars shows that DSI is, however, not mysterious; the reader can learn the generally accepted, evidence-based protocols of the psychological autopsy. Illuminated by individual (idiographic) case studies and general (nomothetic) research, this definitive guide allows the investigator to uncover the bare bones of a suicide or death.

Suicide Assessment and Treatment-Dana Alonzo, Ph.D. 2010-04-29 Suicide is an event that cannot be ignored, minimized, or left untreated. However, all too often mental health professionals and health care practitioners are unprepared to treat suicidal clients. This text offers the latest guidance to frontline professionals who will likely encounter such clients throughout their careers, and to educators teaching future clinicians. The book discusses how to react when clients reveal suicidal thoughts; the components of comprehensive suicide assessments; evidence-based treatments such as crisis intervention, cognitive behavior therapy, dialectical behavior therapy, and more; and ethical and legal issues that may arise. Case studies, exercises, quizzes, and other features make this a must-have reference for graduate level courses. Key topics: Risk and identification of suicidal behaviors across the lifespan (children, adolescents, adults, and the elderly) The links between suicidality and mental illness (psychotic disorders, mood disorders, and substance abuse) Suicide risk among special populations (military personnel, LGBTQ individuals, the homeless, and more) A model for crisis intervention with suicidal individuals Cognition and Suicide-Thomas E. Ellis 2006 Cognitive-behavior therapy (CBT) leads the field of psychotherapy in the evidence-based study and treatment of many psychological disorders. However, CBT has been less prominently applied to the study and prevention of suicidal behaviors. This volume is a compilation of theory, research, and intervention practices focused on cognition and suicide. It brings together for the first time many of the
world's leading authorities, who seek to answer such questions as, ""How is the thinking of suicidal individuals different from nonsuicidal individuals?"" ""What cognitive vulnerabilities place an individual at risk for developing suicidal ideation and behavior when stressed?"" And, ""how does what we know of the thinking of suicidal people translate into cognitive-behavioral treatment strategies?"" Each contributor discusses a particular theoretical and/or research framework, often with specific guidelines for clinical intervention tailored to specific cognitive vulnerabilities exhibited by suicidal patients. All of the major CBT theoretical systems are represented, including Aaron Beck's Cognitive Therapy, Albert Ellis's Rational-Emotive Behavior Therapy, and Marsha Linehan's Dialectical Behavior Therapy. Specific empirically-derived cognitive features are also addressed, such as deficient problem-solving skills, perfectionism, negative body image, and overgeneral autobiographical memory. Implications for understanding and intervening with suicidal individuals are profound - suicidal thought processes are viewed here as causal (as opposed to merely correlated) factors in suicidality. Such thoughts, perhaps for the first time, begin to be viewed, not only as part of the problem, but as part of a potential solution. Understanding Suicide-Philippe Courtet 2016-03-05 In this book international experts address a range of key current issues relating to suicide. The opening chapters discuss nosology, definitions, clinical determinants, and conceptual models of the suicide process and consider the evidence regarding potential biomarkers of suicide risk based on neuroscientific research. Adopting a neo-Durkheimian perspective, the role of various social factors in the genesis of suicidal behavior is then explored in depth. Practical user-friendly tools that facilitate risk assessment by clinicians are provided, and detailed consideration is given to efficient and innovative strategies for the prevention of suicide and the treatment of suicidal behavior, such as psychotherapy, psychopharmacological approaches, and effective
organization of care, including surveillance and the use of online tools. The final part of the book focuses on the need for and development of a personalized approach within the field of suicide prevention.

Handbook of Contemporary Behavioral Economics-Morris Altman
2006

Suicide and Self-Harm in Prisons and Jails-Christine Tartaro
2010-07-12 This book explores several topics pertaining to suicide and deliberate self-harm in the corrections setting, including who tends to commit these acts; where, when, and how these incidents occur; screening mechanisms; the role of environmental stimuli in facilitating or preventing acts of self harm; interpersonal relations among inmates and between inmates and staff; the role of the courts in setting and ruling on suicide prevention policies; and diversion and re-entry plans for offenders.

Latinas Attempting Suicide-Luis H. Zayas 2013-01-17 Among teenage Latinas in the United States, suicide attempts occur at rates sometimes twice as high as other youth. This book looks into the development of young Latinas, girls caught between two cultures, struggling to reconcile them.

The Neuroscience of Suicidal Behavior-Kees van Heeringen
2018-08-23 Contrary to common belief, suicide is preventable and insights from neuroscientific research show how.

Psychotherapy with Suicidal People-Antoon A. Leenaars
2004-05-14 Almost a million people die by suicide every year (WHO estimate) The sheer numbers have made suicide prevention a major health target, but effective prevention is not straightforward. Suicide is a complex event, more complex than most of us imagine, calling for an equally complex response. Psychotherapy with Suicidal People provides a multi-component approach, with rich clinical data including many case histories, to guide the reader. Based on decades of research from across the globe, Antoon A. Leenaars takes the reader into the mind of the suicidal person, from the young to the elderly, from the
Suicide As A Learned Behavior

Suicide-Ronald V. Clarke 2013-06-30 Suicide prevention is a major goal of the Public Health Service of the US government. This has been the case since the 1960s when the National Institute of Mental Health established a center for the study and prevention of suicide. Since then, however, the knowledge and research gathered has not bought about the reduction of suicide. Suicide: Closing the Exits was written to change this trend. This book reports a program of research concerned with preventing suicide by restricting access to lethal agents, such as guns, drugs, and carbon monoxide. It may seem implausible that deeply unhappy people could be prevented from killing themselves by "closing the exits," but the idea is not a new one and has been discussed widely in the literature. The authors argue that restricting access to lethal agents should be considered a major preventive strategy, along with the psychiatric treatment of depressed and suicidal individuals and the establishment of suicide prevention centers to counsel those in crisis. Suicide represents a major contribution to the literature. As such, it should be read by all medical practitioners, policy makers, and psychologists.

Explaining Suicide-Cheryl L. Meyer 2017-01-05 The rate of suicides is at its highest level in nearly 30 years. Suicide notes
have long been thought to be valuable resources for understanding suicide motivation, but up to now the small sample sizes available have made an in-depth analysis difficult. Explaining Suicide: Patterns, Motivations, and What Notes Reveal represents a large-scale analysis of suicide motivation across multiple ages during the same time period. This was made possible via a unique dataset of all suicide notes collected by the coroner’s office in southwestern Ohio 2000-2009. Based on an analysis of this dataset, the book identifies top motivations for suicide, how these differ between note writers and non-note writers, and what this can tell us about better suicide prevention. The book reveals the extent to which suicide is motivated by interpersonal violence, substance abuse, physical pain, grief, feelings of failure, and mental illness. Additionally, it discusses other risk factors, what differentiates suicide attempters from suicide completers, and lastly what might serve as protective factors toward resilience. Analyzes 1200+ suicide cases from one coroner’s office Identifies the top motivations for suicide that are based on suicide notes Discusses the extent to which suicides are impulsive vs. planned Leads to a better understanding on how to prevent suicide Emphasizes resilience factors over risk factors The Interpersonal Theory of Suicide-Thomas E. Joiner 2009 This book offers a theoretical framework for diagnosis and risk assessment of a patient's entry into the world of suicidality, and for the creation of preventive and public-health campaigns aimed at the disorder. The book also provides clinical guidelines for crisis intervention and therapeutic alliances in psychotherapy and suicide prevention.

Suicide in Canada-Antoon A. Leenaars 1998-01-01 Compiled by Canada's leading experts on suicide, this collection provides long-awaited information that focuses specifically on Canada. Suicide Among the Armed Forces-Antoon A Leenaars 2016-12-05 Not since the great military suicide epidemic of the American Civil War have we seen so many of our heroes, our soldiers and
Suicide As A Learned Behavior

veterans, die by suicide. Why? War is violence. There is intent to cause death, or serious injury, or threat to the physical and psychological integrity of others. War stress is unforgiving. Suicide is an all too frequent response. Today, one member of the military dies by suicide every day. This is a new epidemic. This book addresses some tough questions: What do we know about suicides in the military? Are rates high? Or low? Is military suicide the same or different in the United States and Canada? Is military culture relevant? Do we know the causes, patterns, and associations? Is suicide among the armed forces similar to or different from suicide among civilians? Can it be altruistic? Through individual case studies and general/population approaches, we attempt to understand the cost of military service. It is especially through the personal stories of the great Civil War hero General Emory Upton, Admiral of the Navy Mike Boorda, and Hospital Corpsman Chris Purcell that we find answers. We learn there is a relative lack of understanding about military suicides, mainly due to the very complexity of suicide. The nature of suicide is not monolithic--it is multi-determined. Military service, we find, is a risk factor for suicide and suicidal behavior. Military veterans are twice as likely as civilians to die by suicide. Posttraumatic stress disorder (PTSD) and traumatic brain Injury (TBI) are especially noted to be huge risk factors, but so are other physical and psychological injuries. Sadly, the aftershocks of war include not only suicides but also incarceration, motor vehicle accidents, homicides, homicide(s)-suicides, and many more faces of violence. And there are many more, uncounted, wounded and dead. The families of traumatized soldiers and veterans, too, are indirect victims of their traumatic experience and, for some, their suicides; there is secondary traumatization. Yet, as this book shows, we must not forget that despite the unbearable pain of war, soldiers, veterans, and their military families, including children, are typically resilient. They can survive! Without question, our vulnerable heroes and
Suicide As A Learned Behavior

veterans are at risk for suicide. But there is secrecy surrounding this, which may well be the biggest barrier. The government, the Department of Defense, the military, veterans groups, survivors, health providers, and other stakeholders need to develop and support more research, more programs, and more care for suicidal and disabled armed services personnel, veterans, and survivors. This war stress needs to stop.

Suicide Science-Thomas Joiner 2007-05-08 Suicide kills and maims victims; traumatizes loved ones; preoccupies clinicians; and costs health care and emergency agencies fortunes. It should therefore demand a wealth of theoretical, scientific, and fiduciary attention. But in many ways it has Why? Although the answer to this question is multi-faceted, this volume not. supposes that one answer to the question is a lack of elaborated and penetrating theoretical approaches. The authors of this volume were challenged to apply their considerable theoretical wherewithal to this state of affairs. They have risen to this challenge admirably, in that several ambitious ideas are presented and developed.

Ifever a phenomenon should inspire humility, it is suicide, and the volume’s authors realize this. Although several far-reaching views are proposed, they are pitched as first approximations, with the primary goal of stimulating still more conceptual and empirical work. A pressing issue in suicide science is the topic of clinical interventions, and clinical approaches more generally. Here too, this volume contributes, covering such topics as therapeutics and prevention, comorbidity, special populations, and clinical risk factors.

Nonsuicidal Self-Injury-E. David Klonsky 2011 Nonsuicidal self-injury (NSSI) is a baffling, troubling, and hard to treat phenomenon that has increased markedly in recent years. Key issues in diagnosing and treating NSSI adequately include differentiating it from attempted suicide and other mental disorders, as well as understanding the motivations for self-injury and the context in which it occurs. This accessible and practical
book provides therapists and students with a clear understanding of these key issues, as well as of suitable assessment techniques. It then goes on to delineate research-informed treatment approaches for NSSI, with an emphasis on functional assessment, emotion regulation, and problem solving, including motivational interviewing, interpersonal skills, CBT, DBT, behavioral management strategies, delay behaviors, exercise, family therapy, risk management, and medication, as well as how to successfully combine methods.

Preventive Strategies on Suicide-René F. W. Diekstra 1995 This volume, produced under the supervision and auspices of the World Health Organization, for the first time brings together information on epidemiological, clinical and preventive-intervention aspects regarding suicide that has global significance and applicability. After a detailed description of the epidemiology of suicide and suicidal behaviour on an international scale, a large part of the book is devoted to the 'how-to's' of developing and organizing suicide prevention programs and services in different national and cultural settings, both at the clinical as well as the community level. In addition, a wealth of practical information for health care workers and volunteers is provided on how to evaluate and deal with acute suicide risk. Examples of successful preventive intervention programs and projects, both from developed as well as from developing countries are provided. Also legal and ethical problems involved in suicide prevention are discussed. Finally, both cultural and biological aspects of suicidal behaviour, as well as their clinical-practical relevance, are discussed. The volume is of relevance to health care professionals and paraprofessionals, lay volunteers and their organizations, health policy makers and all those involved or interested in suicide and its prevention.

The International Handbook of Suicide Prevention-Rory C. O'Connor 2016-09-14 The International Handbook of Suicide Prevention, 2nd Edition, presents a series of readings that
consider the individual and societal factors that lead to suicide, it
addresses ways these factors may be mitigated, and presents the
most up-to-date evidence for effective suicide prevention
approaches. An updated reference that shows why effective
suicide prevention can only be achieved by understanding the
many reasons why people choose to end their lives.
Gathers contributions from more than 100 of the world’s leading
authorities on suicidal behavior—many of them new to this edition.
Considers suicide from epidemiological, psychological, clinical,
sociological, and neurobiological perspectives, providing a holistic
understanding of the subject.
Describes the most up-to-date, evidence-based research and practice from across the globe, and
explores its implications across countries, cultures, and the lifespan.
Subtle Suicide-Michael A. Church 2009 This volume offers a
description and analysis of subtle suicide—a psychological
condition whose victims don’t care if they live or die, and thus act
in self-defeating, self-damaging ways. * Two distinguished
authors, who developed the clinical concept of subtle suicide *
Dozens of case studies based on actually psychotherapy clients
diagnosed as suffering from subtle suicide *
Biographical sketches of well-known people who exhibited subtle suicide
behavior, including Marilyn Monroe, Anna Nicole Smith, Jim Morrison, and Evel Knievel *
An extensive bibliography of print and online resources on a full range of topics related to subtle
suicide and conditions that feed into it.
Suicide Prevention in Schools-Antoon A. Leenaars 1991 Argues
that schools have a much larger role to play in the prevention of
suicide among children and adolescents than they have generally
undertaken hitherto. Sets out various ways in which teachers can
detect suicidal tendencies and make appropriate interventions.
Suicide Across The Life Span-Judith M. Stillion 2015-12-03 First
published in 1996. Routledge is an imprint of Taylor & Francis, an
informa company.
Handbook of Death and Dying-Clifton D. Bryant 2003 "More than 100 scholars contributed to this carefully researched, well-organized, informative, and multi-disciplinary source on death studies. Volume 1, "The Presence of Death," examines the cultural, historical, and societal frameworks of death, such as the universal fear of death, spirituality and various religions, the legal definition of death, suicide, and capital punishment. Volume 2, "The Response to Death," covers such topics as rites and ceremonies, grief and bereavement, and legal matters after death."--"The Top 20 Reference Titles of the Year," American Libraries, May 2004.

The Sealed Box of Suicide-Colin Tatz 2019-09-23 This unique book explores suicide as more than just a manner of death. It challenges the myths, beliefs, dogma, and customs of suicide from the earliest theories. It offers fresh insights into dark spaces. World-wide, suicide deaths are three times greater than homicides, and are increasing. Current approaches to stem this ‘epidemic’ are not working, or have very limited success. Mental health interventions, theories about a suicide or a depression gene, and the ever-increasing dispensing of antidepressants have not lessened the stark statistics. The authors attempt to understand the soul of the suicide — addressing the social, economic, political, historical, geographic, and cultural contexts in which suicide occurs. The social order is indelibly connected to settings, places, circumstances, relationships, occupations, climate, and milieus. Most of the 36 diverse categories of self-motivated deaths defy a ‘one-size-fits-all’ approach. Recognising contexts and looking outside the confines that have imprisoned thinking about suicide, could well be more effective in alleviating or mitigating suicide than years searching for a possible vaccination against such death. The book is an appeal to move beyond the medical model of suicide. Written in a very accessible style, it is of interest to social scientists, philosophers, professionals and researchers in public health, medical and
Suicide As A Learned Behaviour

behavioural sciences, and lay persons alike. A critical, stimulating and moral tale of suicide that provides a new look --Michael J. Kral, PhD, School of Social Work, Wayne State University, Michigan, USA ... a major breakthrough and a step in the right direction in addressing the problem of suicide --Said Shahtahmasebi, PhD, Research Director, the Good Life Research Centre Trust, Christchurch, New Zealand ... informed understanding of suicide’s multiplicity and historical instability –Jennifer White, PhD, School of Youth and Child Care, University of Victoria, British Columbia, Canada

Evidence-Based Practice in Suicidology-Maurizio Pompili 2010-12
An innovative and long overdue book by the world’s leading researchers and practitioners, describing what really works in suicide prevention, the evidence for particular approaches, where the gaps are in our knowledge, and how we can fill them.

Suicide-Michael Cholbi 2011-08-26 Suicide was selected as a Choice Outstanding Academic Title for 2012! Suicide: The Philosophical Dimensions is a provocative and comprehensive investigation of the main philosophical issues surrounding suicide. Readers will encounter seminal arguments concerning the nature of suicide and its moral permissibility, the duty to die, the rationality of suicide, and the ethics of suicide intervention. Intended both for students and for seasoned scholars, this book sheds much-needed philosophical light on one of the most puzzling and enigmatic human behaviors.

Crisis Intervention/Suicide Prevention-Trennis E. Killian 2010-04-14
The 5-minute Pediatric Consult-M. William Schwartz 2003 Now in its revised, updated Third Edition, this best-selling reference is designed for quick consultation on problems seen in infants, children, and adolescents. More than 450 problems are covered in the fast-access two-page outline format that makes The 5-Minute Consult Series titles so popular among busy clinicians.
The book is organized into five sections--chief complaints, diseases, syndromes, physical findings, and tables.

Behavioral Neurobiology of Suicide and Self Harm-Enrique Baca-Garcia 2021-01-22 This book reviews the recent research into biological aspects of suicide behavior and outlines each of the varied, recent approaches to prevent suicide. Suicidal behavior, perhaps, is the most complex behavior that combines biological, social, and psychological factors. A new frontier and new opportunities are opening with the technologies of data acquisition and data analysis. Personalized models based on digital phenotype could provide promising strategies for preventing suicide.

Resources for Suicide Prevention-De Leo, Diego 2018-05-17 This book is based on the TRIPLE i in Suicidology international conferences, which are organised annually by the Slovene Centre for Suicide Research in memory of the late Prof. Andrej Marušic with the aim of promoting intuition, imagination, and innovation in the research and prevention of suicide and suicidal behaviour. The carefully selected chapters provide food for thought to practitioners, researchers, students, and all those who come into contact with the tragedy of suicide, with the hope of stimulating new ideas and interventions in the difficult fight against suicidal behaviours. In four parts, the internationally renowned team of authors summarise the achievements of suicidology so far (both in quantitative and qualitative research), present effective interventions in suicide prevention (including for youths and older people) and knowledge gained in bereavement and postvention studies (such as in different cultures and those bereaved by suicide), and highlight future directions for suicide research and prevention. The volume is thus a useful resource for all those interested in keeping up-to-date with recent research and practice in suicide.
Suicide As A Learned Behavior

Thank you very much for reading suicide as a learned behavior. Maybe you have knowledge that, people have search numerous times for their favorite books like this suicide as a learned behavior, but end up in infectious downloads. Rather than enjoying a good book with a cup of tea in the afternoon, instead they cope with some malicious virus inside their computer.

suicide as a learned behavior is available in our book collection an online access to it is set as public so you can get it instantly. Our book servers hosts in multiple countries, allowing you to get the most less latency time to download any of our books like this one. Kindly say, the suicide as a learned behavior is universally compatible with any devices to read
