The Unreachable Child-Sam B. Morgan 1981

This book offers empirically based approaches to assessment, treatment, and prevention of certain childhood disorders encountered by psychologists and other practitioners in child clinical and pediatric psychology settings. In so doing, it views disorders from a developmental and health psychology perspective that emphasizes prevention of problems as well as positive coping strategies. Traditional topics such as autism and childhood depression are addressed, as are topics that have only recently emerged in the psychological literature. These include childhood diabetes, headaches, psychological aspects of teenage pregnancy, and early development of substance abuse.

Cognitive Development in Atypical Children-L.S. Siegel

For some time now, the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in development mental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence, a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely, edited collections of original chapters by several authors, and original
volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the "advances" type, carrying the subtitle Progress in Cognitive Development Research. Each volume in the Progress sequence is strongly thematic, in that it is limited to some well-defined domain of cognitive developmental research (e.g., logical and mathematical development, development of learning). All Progress volumes will be edited collections. Editors of such collections, upon consultation with the Series Editor, may elect to have their books published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors are being published as separate volumes within the series.

Touching the Unreachable-Fusako Innami 2021-08-30 Fusako Innami offers the first comprehensive study of touch and
skinship—relationality with the other through the skin—in modern Japanese writing. The concept of the unreachable—that is, the lack of characters’ complete ability to touch what they try to reach for—provides a critical intervention on the issue of intimacy. Touch has been philosophically addressed in France, but literature is an effective—or possibly the most productive—venue for exploring touch in Japan, as literary texts depict what the characters may be concerned with but may not necessarily say out loud. Such a moment of capturing the gap between the felt and the said—the interaction between the body and language—can be effectively analyzed by paying attention to layers of verbalization, or indeed translation, by characters’ utterances, authors’ depictions, and readers’ interpretations. Each of the writers discussed in this book—starting with Nobel prize winner Kawabata Yasunari, Tanizaki Jun’ichiro, Yoshiyuki Junnosuke, and Matsuura Rieko—presents a particular obsession with objects or relationality to the other constructed via the desire for touch. In Touching the Unreachable, phenomenological and psychoanalytical approaches are cross-culturally interrogated in engaging with literary touch to constantly challenge what may seem like the limit of transferability regarding concepts, words, and practices. The book thereby not only bridges cultural gaps beyond geographic and linguistic constraints, but also aims to decentralize a Eurocentric hegemony in its production and use of theories and brings Japanese cultural and literary analyses into further productive and stimulating intellectual dialogues. Through close readings of the authors’ treatment of touch, Innami develops a theoretical framework with which to examine intersensorial bodies interacting with objects and the environment through touch.

Child Development-Sueann Robinson Ambron 1987
Paraverbal Communication with Children-E.P. Heimlich
2012-12-06 For over twenty years I have been privileged to observe, participate in, and contribute to the development of the
ideas and techniques that culminated in this most unusual, impressive, and useful book. In words the total experience While it is difficult to convey of this innovative therapeutic approach, this volume enables the reader to become a part of these therapy sessions and to learn to "know" and appreciate these fruitful methods. The techniques described in detail in this volume are designed for use with children who are viewed as "resistant" and uncommunicative—a fairly large percentage of youth who have not responded to traditional therapy. The approach is based on many practical assumptions. Among them are the idea that rhythm, of whatever nature, cannot be "shut out"; that one can have pleasure in producing communication (fun of all things); and that pleasure and acceptance lead to the integration of motility, emotions, and ideation. These all lead to increased self-esteem and competence. The selection of the modality is completely individualized and leads to a therapy with the child—not to or at the child. To complete the circle, the method is eminently teachable. Thus, both students in training and practicing therapists who are concerned with promoting growth and development in the children they treat will find this guide exceptionally useful and stimulating. J. M. Coetzee's Poetics of the Child-Charlotta Elmgren 2020-09-17

Tracing how central tensions in J.M. Coetzee's fiction converge in and are made visible by the child figure, this book establishes the centrality of the child to Coetzee's poetics. Through readings of novels from Dusklands to The Schooldays of Jesus, Charlotta Elmgren shows how Coetzee's writing stages the constant interplay between irresponsibility and responsibility-to the self, the other, and the world. In articulating this poetics of (ir)responsibility, Elmgren offers the first sustained engagement with the intersections between Coetzee's work and the philosophical thought of Giorgio Agamben. With reference also to Hannah Arendt's thinking on natality, education, and amor mundi, Elmgren demonstrates the inextricable links in Coetzee's writing between freedom, play, and serious attention to the world. The book identifies five central dynamics of Coetzee's poetics: the child as a figure of truth-telling and authenticity; the ethics of the not-so-other child; the child, new beginnings and care for the world; childish behaviour as perpetual study; and the redemptive potential of infancy. Offering a fresh contribution to the field of
literary childhood studies, Elmgren shows the critical possibilities in thinking about-and with-childlike openness and childish experimentation when approaching the writing and reading of the work of J.M. Coetzee and beyond.

Louisa May Alcott and the Textual Child-Kristina West 2020-06-13

This book examines constructions of childhood in the works of Louisa May Alcott. While Little Women continues to gain popular and critical attention, Alcott’s wider works for children have largely been consigned to history. This book therefore investigates Alcott’s lesser-known children’s texts to reconsider critical assumptions about childhood in her works and in literature more widely. Kristina West investigates the trend towards reading Alcott’s life into her works; readings of gender and sexuality, race, disability, and class; the sentimental domestic; portrayals of Transcendentalism and American education; and adaptations of these works. Analyzing Alcott as a writer for twenty-first-century children, West considers Alcott’s place in the children’s canon and how new media and fan fiction impact readings of her works today.
